(54) Title: FOOTWEAR ITEM FOR RACKET SPORTS

(54) Titre : ARTICLE CHAUSSANT POUR SPORTS DE RAQUETTE

(57) **Abstract:** The invention relates to a footwear item that is designed for racket sports. The inventive item comprises a sole consisting of an outer face (1a) which is intended to come into contact with the ground and an inner face (2b) which is intended to come into contact with the foot of the user. According to the invention, the sole includes a dynamic element which can be used to store and release energy when said sole is subjected to lateral stresses. The aforementioned dynamic element comprises (i) a return element (3) which is positioned in the sole such that it expands at least partially beneath the area corresponding to the arch of the foot and at least partially beneath the area corresponding to the front part of the foot and (ii) at least two elastically-deformable lateral ground support parts which are located longitudinally on either side of the metatarsus support zone.

(57) **Abrégé :** Il s'agit d'un article chaussant pour sport de raquette, comportant une semelle dont la face externe (1a) est destinée à venir en contact avec le sol et dont la face interne (2b) est destinée à venir en contact avec le pied d'un utilisateur. La semelle comporte un organe dynamique permettant d'emmagasiner et de restituer

FOOTWEAR ITEM FOR RACKET SPORTS

Abstract

5 The invention relates to a footwear item that is designed for racket sports. The inventive item comprises a sole consisting of an outer face (1a) which is intended to come into contact with the ground and an inner face (2b) which is intended to come into contact with the foot of the user. According to the invention, the sole includes a dynamic element which can be used to store and release energy when said sole is subjected to lateral stresses.

10 The aforementioned dynamic element comprises (i) a return element (3) which is positioned in the sole such that it expands at least partially beneath the area corresponding to the arch of the foot and at least partially beneath the area corresponding to the front part of the foot and (ii) at least two elastically-deformable lateral ground support parts which are located longitudinally on either side of the metatarsus support zone.
